                                                                     repeat_region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           On Apr 12, 2001 this sequence version replaced gi:13276997.
On Apr 12, 2001 this sequence version replaced from overlapping clones.

Where differences are found these are annotated as variations

together with a note of the overlapping clone name. Note that the

variation annotation may not be found in the sequence submission

corresponding to the overlapping clone, as we submit sequences with

only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all

regions were either double-stranded or sequenced with an alternate

chemistry or covered by high quality data (i.e., phred quality >=

30); an attempt was made to resolve all sequencing problems, such

as compressions and repeats; all regions were covered by at least

one plasmid subclone or more than one M13 subclone; and the

assembly was confirmed by restriction digest. The following

abbreviations are used to associate primary accession numbers given

in the feature table with their source databases: Em. EMBL; Sw:,

SWISSPROT; Tr. TREMBL; Wp:, WORMPEP; Information on the WORMPEP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      4138
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1102

RP11-178Cl0 is from the library RPCI-11.1 constructed by the group of Pieter de Jong. For further details see
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AL136961 98861 k
Human DNA sequence from clone
                                                                                                                                                                                                                                                                            RP11-178C10 It may be shorter because we sequence overlapping sections only once, except for a 100 base overlap. The true right end of clone RP11-178C10 is at 98861 in this sequence. The true right end of clone RP11-461N23 is at 100 sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    http://www.sanger.ac.uk/Projects/C elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 13, constructed by the Sanger Centre Chromosome 13 mapping Group.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            * NOTE: This record contains 152 individual
* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low-pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
* the record is updated, the accession number will
* be preserved.

consists of 4 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Length 162543;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            NOTE: This is a 'working draft' sequence. It currently consists of 9 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Web site: http://www-seq.wi.mit.edu

Center project Information
Center project name: 119343
Center clone name: 469 E 6
Sequencing vector: plasmid; n/a; 100% of reads
Center clone program: plasmid; n/a; 100% of reads
Assembly program: Phrap; version 0.960731
Consensus quality: 187732 bases at least Q40
Consensus quality: 189732 bases at least Q30
Consensus quality: 1897429 bases at least Q20
Insert size: 183000; agarose-fp
Insert size: 183000; agarose-fp
Quality coverage: 10.2 in Q20 bases; sum-of-contigs
Quality coverage: 9.9 in Q20 bases; sum-of-contigs

It currently consists of 2 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

This sequence will be replaced
by the finished sequence as soon as it is available and the accession number will be preserved.

Clone distribution: MGC clone distribution information can be found through the I.M.A.G.E. Consortium/LLNL at: http://image.llnl.gov Series: IRAK Plate: 112 Row: o Column: 14
This clone was selected for full length sequencing because it passed the following selection criteria: Hexamer frequency ORF analysis, Similarity but not identity to protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Contact: nisc mgo@nhgri.nih.gov

On Nov 19, 2002 this sequence version replaced gi:22771237.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold') within each contig-scaffold') within each contig-scaffold by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
NOTE: This is a 'working draft' sequence. It currently consists of 3 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

(see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

* NOTE: This is a 'working draft' sequence. It currently

* consists of 1 contigs. Gaps between the contigs

* are represented as runs of N. The order of the pieces

* is believed to be correct as given, however the sizes

* of the gaps between them are based on estimates that have

* provided by the submittor.

* This sequence will be replaced

* by the finished sequence as soon as it is available and

* the accession number will be preserved.

1 244625: contig of 244625 bp in length.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Web site: http://www.hgsc.bcm.tmc.edu/

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

ALIGNMENTS

New isolated G protein coupled receptor polypeptides and polynucleotides, useful in gene therapy, particularly for treating or preventing cardiomyopathy, atherosclerosis, diabetes, multiple sclerosis, Crohn's disease or cancer. G protein coupled receptor related protein; ss; gene; human; GPCR; cardiomyopathy; atherosclerosis; diabetes; cancer; stroke; von Hippel-Lindau syndrome; Alzhaimer's disease; tuberous sclerosis; hypercalcaemia; Parkinson's disease; Huntington's disease; cerbral palsy; epilepsy; Lesch-Nyhan syndrome; multiple sclerosis; ataxia-telangiectasia; leukodystrophy; addiction; anxiety; depression; pain; obesity; Crohn's disease; osteoporosis; haemophilia; asthma; inflammatory bowel disease, infertility; hypertension; scleroderma; arthritis; human immunodeficiency virus; autoimmune disease; HIV; 'n Kekuda Casman SJ, Bdinger SR, Bllerman K, Smithson G, Muralidhara P; infection; graft-versus-host disease. cDNA encoding human GPCR16 protein. ABS64723 standard; cDNA; 1104 BP 03-JAN-2001; 2001US-0259552P. 09-JAN-2001; 2001US-0260544P. 20-MAR-2001; 2001US-0277405P. 03-JAN-2002, 2002WO-US000056. (first entry) (CURA-) CURAGEN CORP. WPI; 2002-643487/69. P-PSDB; ABG32286. WO200264793-A2. Homo sapiens. 15-NOV-2002 22-AUG-2002. ABS64723; RESULT 1 ABS64723

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        \delta
                                                                This invention relates to a new isolated G-protein coupled receptor (GPCRX) polypeptide sequence and the cDNA encoding it. The GPCRX polypeptide sequence and the cDNA encoding it. The GPCRX polypeptide sequence and the cDNA encoding it. The GPCRX ancleic cold and antibody specific to the protein are useful for treating, preventing or alleviating a GPCRX-associated disorder related to cell signal processing and metabolic pathway and alsorder related to cell signal processing and metabolic pathway modulation. The GPCRX polypeptide and mucleic acid are also useful for altered levels of GPCRX, particularly cancer. The GPCRX nucleic acid and polypeptide are especially useful in the manufacture of a medicament for the appendic or prophylactic applications for disorders associated with a berrant GPCRX expression or activity, e.g. von Hippel-Lindau syndrome, are disease, stroke, tuberous sclerosis, hypercalcaemia, contained as a sepecially useful in the manufacture of a medicament for the aberrant GPCRX expression or activity, e.g. von Hippel-Lindau syndrome, allengament stroke, tuberous sclerosis, hypercalcaemia, contained as addiction, anxiety, depression, pain, obesity, Crohn's lesch-Nyhan syndrome, multiple sclerosis, ataxia-telangiectasia, lucyertension, scleroderma, haemophila, astehma, arthritis, human immundeficiency virus, autroimmune disease, infertility, hyman submundeficiency virus, autroimmune disease, infertility, bypertension, scleroderma, haemophila, astehma, arthritis, human immundeficiency virus, autroimmune disease, infertility, bypertension, scleroderma, haemophila, astehma, arthritis, human immundeficiency virus, autroimmune disease, infertility, by protein is useful in gene therapy for treating the above conditions to protein is useful in gene therapy for treating the above conditions to protein subplied, tissue typing, preventive medicine, and protein for a subject or protocomics. These are further used as hybridisation probes, in the fortened as a subject or secure and as an expense or a subject
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        pharmacogenomics. These are also useful in developing powerful assay system for functional analysis of various human disorders, as well as in diagnostic applications. The present sequence represents the CDNA encoding a human G protein coupled receptor related protein (GPCR) of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         481 CAGACGATGCCCTTGCTCTTGATGCCCATGACCAAGCCGCTGGTGGGCAAGCTGGCCTGC 540

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      3659 GGACAGCCCGAGAGGACCCAGTGACCAGCGGAAAGGACGCCACCGGCGGGACAGCCCGG 3718
                                                                                     The invention relates to a novel polynucleotide encoding a guanosine triphosphate-binding protein coupled receptor (GPCR). A polynucleotide of the invention may have a use in gene therapy. The polynucleotide and polypeptide are useful for preparing a composition for treating a patient in need of increased or suppressed activity or expression of the guanosine triphosphate-binding protein coupled receptor. The polynucleotide sequences shown in ADC85548-ADC87616 encode GPCR's of the invention.

(HUMA-) HUMAN GENOME SCI INC

Rosen CA, Barash SC, Ruben SM

WPI; 2001-483426/52.

Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis.

Disclosure; SEQ ID NO 31289; 3071pp + Sequence Listing; English.

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (1)
amino acid sequences given in AAM82170 to AAM91921. (1) have cytostatic
activity, and can be used in gene therapy and vaccine production. (1)
proteins and polynucleotides may be used in the prevention, diagnosis and
treatment of diseases associated with inappropriate (1) expression. For
example, they may be used to treat disorders associated with decreased
expression by rectifying mutations or deletions in a patient's genome
that affect the activity of (1) by expressing inactive proteins or to
supplement the patients own producetion of (3). Additionally, (1)
polynucleotides may be used to produce the secreted (1), by inserting the
purchial of the activity of (1) and culturing the cell and culturing the cell to express the
protein. (1) proteins and polynucleotides may be used to prevent,
diagnose and treat immune/haematopoietic-related diseases, especially
cancers and cancer metarsases of haematopoietic derived cells. AAK64703
to AAK807694 represent human immune/haematopoietic antigen genomic
sequences from the present invention. AAK54951 to AAK54950 and AAM82169

1041 1570 1450 1510 1101 Human, gene; ss; inflammatory condition; shock; sepsis; immune response; cancer; wound healing; central nervous system disease; haematopoiesis; peripheral nervous system disease; amyotrophic lateral sclerosis; tendon; myeloid cell disorder; lymphoid cell disorder; platelet disorder; bone; cartilage; ligament; nerve tissue; ulcer; osteoporosis; osteoarthritis; bone degenerative disorder; periodontal disease; reperfasion injury; lung fibrosis; liver fibrosis; autoimmune disorder; bacterial infection; allergic condition; thrombolysis; thrombosis; coagulation disorder; 981 The invention relates to human novel polynucleotides and associated polypeptides. The polynucleotides and polypeptides are useful for treating inflammatory conditions such as arthritis, nephritis, Crohn's disease, ischaemia-repertusion injury, shock, sepsis, immume responses and cancer and for promoting wound healing. The sequences are used to induce the proliferation of neural cells and responsation of neural brain tissue, and are useful for the treatment of central and peripheral nervous system diseases and neuropathies, such as Alzheimer's disease, Parkinson's disease, Huntington's disease and amyotrophic lateral TCCTCCTCCTCCTCCTCCTCCACCAGGAAAGCTTCTTCAGAAACACCAAGTATCACC CAGGCCAGAGGTTCTATGTTCTTAGCGGAGCACGTGGTCTAACGTGTCATTTGCTTTATG 1391 GCATCCACCATTACAGGAAATGGCTCCTGGGCATTTTAAAGCTCAAAGGGTCTTCCTCC GCATCCACCCATTACAGGAAATGGCTCCTGGGCATTTTAAAGCTCAAAGGGTCTTCCTCC 'n Novel nucleic acids and polypeptides for diagnosis, treatment of inflammatory, autoimmune, nervous system, myeloid or lymphoid cell disorders, cancer and promoting wound healing. sclerosis. The sequences are involved in chemotactic or chemokinetic cativity, requisation of haematopoiesis, treatment of myeloid or lymphoid cell disorders and platelet disorders such as thrombocytopenia, regeneration of bone, cartilage, tendon, ligament and/or nerve tissue growth, tissue repair, healing of burns, incisions, ulcers, treatment of osteoporosis, osteoarthritis, bone degenerative disorders and periodontal disease. The sequences of the invention are also useful for gut protection or regeneration and treatment of lung or liver fibrosis, repertuation injury in various tissues, immune deficiencies and disorders including severe combined immunodeficiency (SCID), bacterial or fungal infections, autoimmune disorders eg. multiple solerosis and mysathenia gravis, allergic conditions used as asthma, thrombolysis or thrombosis and cosquiation disorders.                                                                                                                                                                  1380
                                                                                                                                                                                                                                    1439
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) princers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful in geneticating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging
                                                                                                                                862

                         involving aberrant protein expression or biological activity. The bolypeptide and polyunclochide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce orcher types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this patent din not appear in the printed specification, but was obtained in ftp.wipo.int/pub/published_pct_sequences
(II). (I) and (II) are useful for treating disorders rotein expression or biological activity. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an isolated polypeptide encoded by a nucleic acid molecule that is at least 80% identical to the G protein-coupled (GPCR) polynucleotides included in the specification. Also included are probes based on the GPCR sequences (including antisense probes), a host cell comprising an expression vector comprising the GPCR sequence.

RESULT 7

antibodies raised against the polypeptides, and methods of identifying modulators of the polypeptides. The polypeptides are useful for identifying modulators compounds which function as modulators, activators, repressors, agonists or antagonists of the movel GPCR polypeptides of including the GAL4 polypeptide. The antibodies and nucleic acid probes as described above can be used to detect the presence of the polypeptides of an uncleic acids and are used to diagnose a variety of disease, of ascracin which GPCRs are involved e.g., Alzheimer's disease, anyotrophic lateral sclerosis, asthma, atherosalerosis, basal cell carcinoma, breast carcinoma, acardiomyopathy, chondrosarcoma, chronic obstructive pulmonary disease, Crohn's disease, depression, epilepsy, macular degeneration, lymphoma, melanoma, multiple sclerosis, rheumatoid arthritis, osteoporosis, Parkinson's disease, psoriasis, rheumatoid arthritis, schoporosis, Parkinson's disease, psoriasis, rheumatoid arthritis, schoporosis, parkinson's disease, psoriasis, rheumatoid arthritis, schizophrenia, ulcration, The probes and antibodies are also useful for disagnosing cognition and memory disorders, anorexia, hormonal release disorders, cardiovascular activity disorders, pain perception disorders, obesity, diabetes, Alzheimer's disease. Preferably, compounds that decrease or increase the expression of galanin receptor (GAL4) can be used to treat obesity, diabetes, hyperlipidaemia and stroke. The GPCR nucleic acid is useful for treating the above mentioned disorders by gene the invarion

Sequences AAS42906-AAS42926 represent cDNA molecules and PCR primers for cDNA molecules encoding human G-protein coupled receptor (GPCR)

CDNA molecules encoding human G-protein coupled receptor (GPCR)

Color compounds which bind to GPCR polypeptides and in screening to identify compounds which bind to GPCR polypeptides and in screening to compounds that modulate GPCR activity. By screening a human subject for the presence of mutations in GPCR pNA, a GPCR-related disorder or a contract predisposition can be diagnosed. The sequences can also be used genetic predisposition can be diagnosed. The sequences can also be used to treatment and prevention of mental disorders such as schizophrenia, attention deficit disorder, anxiety, depression, dementia and bipolar disorder, neurological disorders such as Huntington's disease, can disease and Tourette's syndrome, metabolic disorders such as obesity, anorexia and type 2 diabetes, cardiovascular disorders such as thrombosis, myocardial infarction, cardiomyopathy and atherosclerosis, viral infections caused by HIV and cancers
                                                                                                                                      Human; G-protein coupled receptor; GPCR; mental disorder; schizophrenia; attention deficit disorder; anxiety; depression; bipolar disorder; ss; neurological disorder; Huntington's disease; dementia; obesity; anorexia; metabolic disorder; Parkhinson's disease; Tourette's syndrome; thrombosis; type 2 diabetes; cardiovascular disorder; myocardial infarction; cancer; cardiomyopathy; atherosclerosis; human immunodeficiency virus; HIV; viral infection; immunostimulant; neuroloptic; nootropic; tranquiliser; antidepressant; anorectic; PCR primer; gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New isolated nucleic acid encoding a new G-protein coupled receptor polypeptide for detecting receptor modulators that can treat mental disorders, such as schizophrenia, anxiety, depression, or obesity.
                                                                                                          Human G Protein-Coupled Receptor (GPCR) cDNA #35.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ь,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Lind

protein-coupled receptors termed nGPCR-x nGPCR-x polynucleotides, polypeptides, and modulators may be used in the traatment of diseases and conditions such as viral infections caused by HIV-1 (human immunodeficiency virus) or HIV-2, pain, cancers, metabolic and cardiovascular diseases and disorders (e.g., type 2 diabetes, obesity, anorexia, hypotension, myocardial infarction.

Approxia, pypotension, myocardial infarction, obsity, anorexia, hypotension, and disease, and psychotic and neurological disorders, including schizophrenia, migraine, major depression, anxiety, mental disorder, manic depression, and dyskinesias, such as Huntington's disease or Tourette's Syndrome and many other diseases and syndromes listed in the specification. nGPCR-x polymucleotides and polypeptides, well as nGPCR-x modulators, may also be used in diagnostic assays for such diseases or conditions. The present sequence encodes a G protein-coupled receptor of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          816

The invention relates to an isolated polypeptide encoded by a nucleic acid molecule that is at least 80% identical to the g protein-coupled (GPCR) polynucleotides included in the specification. Also included are probes based on the GPCR sequences (including antisense probes), a host cell comprising an expression vector comprising the GPCR sequence. The polypeptides, and methods of identifying modulators of the polypeptides, and methods of identifying modulators of the polypeptides, and methods of identifying modulators of antagonists of properties are useful for identifying modulator compounds which function as modulators, activators, repressors, agonists or antagonists of the polypeptides as including the GAL4 polypeptide. The antibodies and nucleic acid sud are used to detect the presence of the polypeptides of and mucleic acids and are used to detect the presence of the polypeptides and mucleic acids and are used to diagnose a variety of diseases or disorders in which GPCRs are involved e.g., Alzheimer's disease, or arctinoma, breast carcinoma, sathma, atheroscalerosis, basal cell carcinoma, breast carcinoma, adheroscalerosis, basal cell carcinoma, breast carcinoma, melanoma, multiple sclerosis, obstructive pulmonary disease, crohn's disease, georiasis, replacementario, lymphome, melanoma, multiple sclerosis and many other disease listed in the specification. The probes and antibodies are also useful for diagnosing cognition and memory disease, pain perception classes the expression of galanin receptor (GAL4) can decrease or increase the expression of galanin receptor (GAL4) chart decrease or increase the expression of galanin receptor (GAL4) can be used to treat obesity, diabetes, hyperlipidaemia and stroke. The GPCR
                                                                                                                                                                                                                                       Human; G protein-coupled receptor; GPCR; ds; GAL4; galanin receptor; Alzheimer's disease; amyotrophic lateral solerosis; asthma; atherosclerosis; baselma; amyotrophic lateral solerosis; asthma; atherosclerosis; basal cell carcinoma; breast carcinoma; cardiomyopathy; chondrosarcoma; chronic obstructive pulmonary disease; Crohn's disease; depression; epilepsy; macular degeneration; lymphoma; melanoma; multiple sclerosis; osteoarthritis; osteoporrosis; parkinson's disease; psoriasis; rheumatoid arthritis; schizophrenia; ulcerative colitis; tuberrolosis; cognition disorder; memory disorder; acradiovascular activity disorder; pain perception disorder; obesity; diabetes; obesity; diabetes;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel G protein-coupled receptor polypeptides including galanin receptor polypeptides useful for identifying modulators that are useful for treating Alzheimer's disease, psoriasis, melanoma, multiple sclerosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Brown JP, Miller M, Burmer G, Fabre-Suver C, Pritchard D;
                                                                                                                                                                                               Human DNA for potential G protein-coupled receptor #68.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               hyperlipidaemia; stroke; gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 2; Page 83; 144pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (LIFE-) LIFESPAN BIOSCIENCES INC.
